

# Plagiarism in a Grant Proposal

## Author(s)

Caroline Whitbeck

## Year

2000

## Description

A scenario about a researcher who figures out that a different research group in her lab plagiarized her work for a now approved grant proposal.

## Body

You are making steady progress on the research for the doctorate working in Large Lab and have written a report for Large Lab on some of that experimental work. Another group in Large Lab has been desperate for grant support to allow another student to finish up a master's degree. After one of their proposals is funded, you note that what they proposed to do is exactly what you already did and described in your report for Large Lab.

- What can or should you do?
- What is the relative seriousness of plagiarism in a proposal and plagiarism in a publication?
- How, if at all, might some of the damage be remedied?

## Notes

Caroline Whitbeck introduced methods and modules for discussing numerous issues in responsible conduct of research at a Sigma Xi Forum in 2000. Partial funding for the development of this material came from an NIH grant.

You can find the entire sequence on the OEC at [Scenarios for Ethics Modules in the Responsible Conduct of Research](#). Some information in these historical modules may be out-of-date; for instance, there may be a new edition of the professional society's code that is referred to in an item. If you have suggestions for updates, please contact the OEC.
