Victor J. Dzau

Year

1994

Description

Statement of Silvergate & Good Concerning the Dismissal of the Indictment in United States v. David M. LaMacchia.

Body

The following [statement](#) was released by the Presidents of the National Academies of Sciences, Engineering, and Medicine on January 16, 2018:

The highest standards of scientific integrity, transparency, and accountability are critical to maintaining public confidence in our nation's research enterprise and in the wise use of the public investment in

research. The public expects policymakers and agencies to base those investments on independent advice and assessment from unbiased experts without political interference. For these reasons, the National Academies of Sciences, Engineering, and Medicine view any political review of scientific proposals as inappropriate, as it gives the appearance of political interference in science. At the same time, we recognize the prerogative of federal agencies to align funding programs with their mission priorities in their calls for proposals and in their requests that reviewers assess the relevance of proposals to agency priorities as one of the criteria in proposal evaluation.
