
Description

Body

"The National Academies’ Science, Technology, and Law Program held a one-day workshop to explore the mounting tensions in the federal regulatory process between the need to provide access to research data and the need to protect the integrity of the research process. The workshop provided a picture of the debate arising from passage of the Shelby Amendment and the resulting OMB revisions of Circular A-110. It also took a broad look at the competing interests seeking access to research data by providing various groups with an opportunity to voice their views on public access to research data. In addition, the workshop explored alternative approaches that might be used to improve public access to research data."
