Framework for Addressing Ethical Dimensions of Emerging and Innovative Biomedical Technologies: A Synthesis of Relevant National Academies Reports

Author(s)

Anonymous

Body

Over the past 15 years, the National Academies of Sciences, Engineering, and Medicine (the National Academies) have convened multiple committees of leading experts to address ethical challenges related to innovative and emerging biomedical technologies. After reviewing prior National Academies' reports, individual ethics principles and considerations were identified and grouped into sets of related considerations to establish guidelines for future studies.

Framework for Addressing Ethical Dimensions of Emerging and Innovative Biomedical Technologies provides a synopsis of principal ethical commitments and core values that characterize the National Academies' work in the domain of emerging biomedical technologies. This publication offers a synthesis of relevant National Academies' reports.
