Promising Practices and Innovative Programs in the Responsible Conduct of Research: Proceedings of a Workshop

Year

2023

Abstract

The responsible conduct of research (RCR) is foundational to good science and engineering. However, there are several serious detrimental effects of research not conducted ethically and responsibly. Thus, federal legislation mandates that all National Science Foundation (NSF) grant recipients provide adequate training for undergraduate students, graduate students, and postdoctoral researchers about the Responsible Conduct of Research, and the National Institutes of Health (NIH) further specifies that topics such as conflict of interest, mentor/mentee responsibilities and relationships, collaborative research, and safe laboratory practices should be included in all instruction in RCR.
